= a nicer product

RIB PULLER / BLADE BONE PULLER / RIB-TOP SAW

RIB-TOP SAW

Grønkjær's patented Rib-top saw makes work more efficient. Higher yield from cutting, as working with the curved saw gives a more precise cut. When cutting pigs and sows, e.g. when this is done on a moving conveyor belt, production must happen in a minimum of time. With its geostatic suspension and spring lift the Rib-top saw is easy to handle. It is also used for cattle and comes as a vertical module with a special lifting system. Can withstand water and can be cleaned easily by using high-pressure washing.

Suspended from a guide rail. Control line with electricity and air connection. Spring lift.

Quiet.

First-class safety equipment. Two-handed control with activating switch in both handles. Start protection on guard and motor brake.

Ergonomically correct working position. The geostatic suspension ensures easy handling of the saw. Adjustable handles.

RIB-PULLER

CE

The rib puller has become an essential tool for the abattoirs where it has been introduced in production. It is used in Denmark, the UK, Sweden and Canada.

A higher yield can be obtained as the bone is pulled off cleanly without also pulling off the meat and membrane. Quick operation and less physical strain. The ergonomically shaped handles help to make the rib puller extremely popular in the workplace.

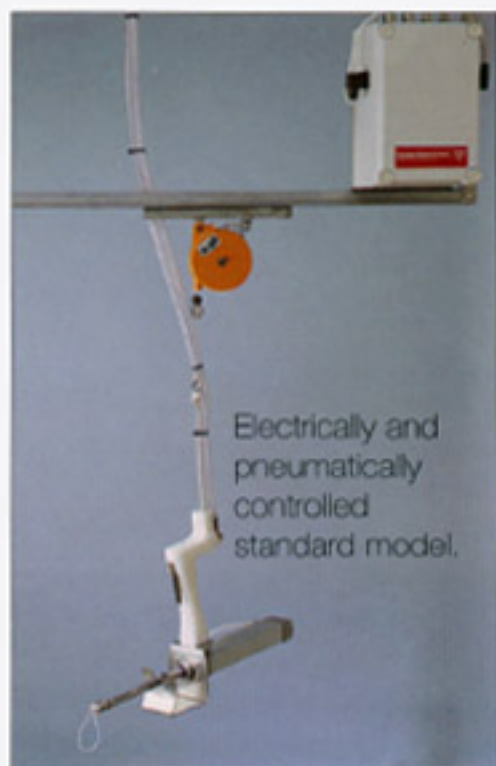

Combined electrically and pneumatically powered rib puller with a 6V inductive sensor in the handle.

Easy to clean.

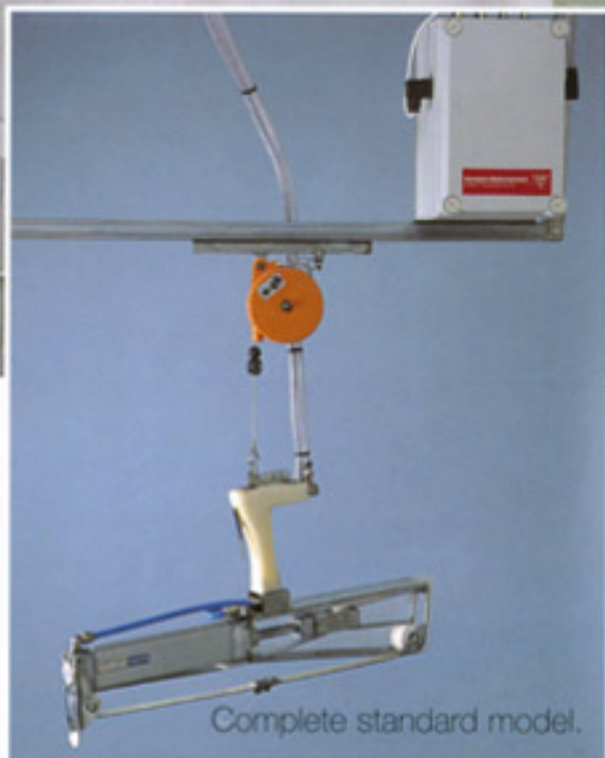

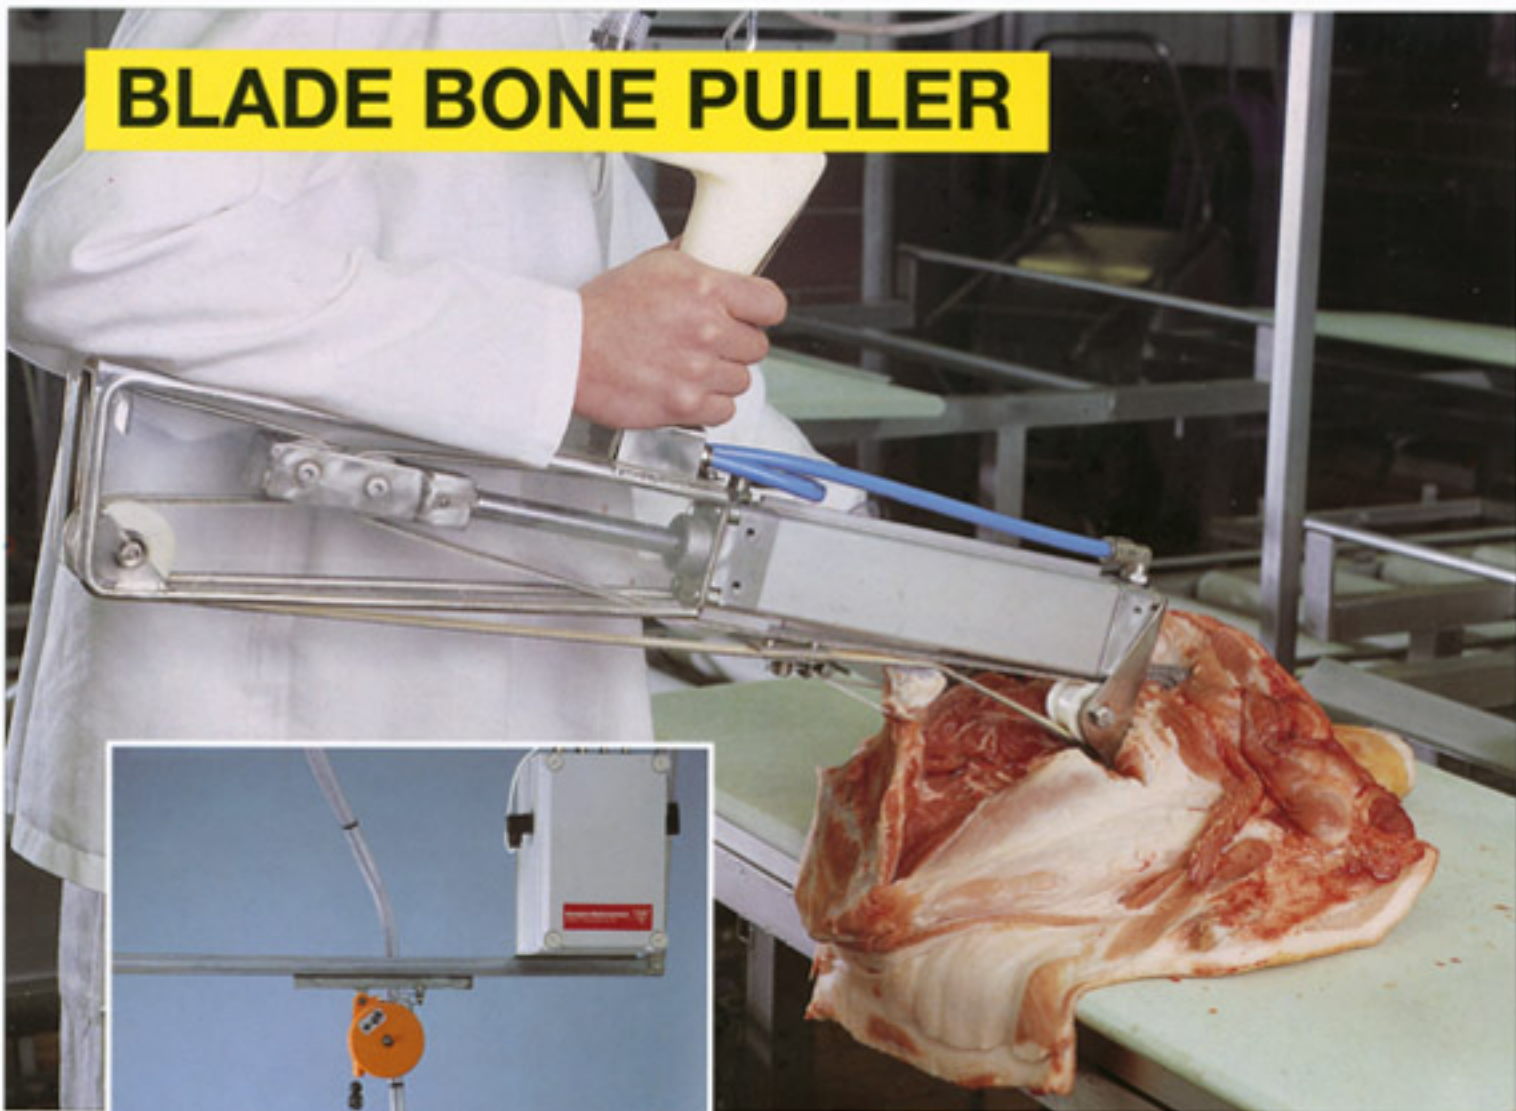

Pneumatic rib puller, a little faster, but a slightly harder work procedure.

Electrically and pneumatically controlled standard model.

BLADE BONE PULLER

Complete standard model.

Particularly suitable for sows and larger pigs. Compact and handy. The small specially designed bowl at the end of the tool makes it easier to get a hold of the blade bone.

Less strain and easy to operate.

Ask for a video film, demonstrating all three products. The machines can be produced and adjusted according to the customer's requirements.

Grønkjærs Maskinværksted offers assistance with installing and running in the first machines.
